Schlüsselwörter

Identity, Security

Symptom (öffentlich)

Problem (öffentlich)

Lösung (öffentlich)

The ability through historical logs and logical analysis to prevent or discourage an Entity from denying that it had acted as an Identity in a given transaction, especially in a legal sense. It may need to be based on a biometric and include encrypted audit trails to be successful in a court of law; otherwise the offender could be able to plead guilty to the lesser charge of leaving their password on a Post-It Note.
